AMENDMENTS TO THE CLAIMS

Claims 1-27 are pending. Claims 1-14 and 19-23 are cancelled without prejudice to pursue in a related application. A complete listing of the current pending claims is provided below and supersedes all previous claims listing(s).

- 1-14. (Cancelled)
- 15. (Original) An apparatus comprising: means for dividing p pins of an integrated circuit into n groups; means for logically associating the pins of each group through an ExOR matrix; and means for driving a plurality of scan chains in the integrated circuit with the logically associated pins.
- 16. (Original) The apparatus of claim 15, wherein said means for logically associating the pins further comprises:

means for generating $(p/n)^n$ logical associations, where p is the number of pins, and n is the number of groups of pins.

- 17. (Original) The apparatus of claim 15, wherein the number of scan chains is equal to the number of logical associations.
- 18. (Original) The apparatus of claim 15, wherein the ExOR matrix has n dimensions.
 - 19-23. (Cancelled)
- 24. (Original) An article of manufacture comprising:
 a computer readable medium storing a computer program comprising:
 code for dividing p pins of an integrated circuit into n groups;
 code for logically associating the pins of each group through an ExOR matrix; and
 code for driving a plurality of scan chains in the integrated circuit with the logically
 associated pins.
- 25. (Original) The medium of claim 24, wherein said code for logically associating the pins further comprises:

code for generating $(p/n)^n$ logical associations, where p is the number of pins, and n is the number of groups of pins.

- 26. (Original) The medium of claim 24, wherein the number of scan chains is equal to the number of logical associations.
 - 27. (Original) The medium of claim 24, wherein the ExOR matrix has n dimensions.
